DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

I. Claims 1-4, 6, 9, and 11-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Sato (US 5,511,068).

1. Regarding claims 1, 9, and 11 - Santo discloses a radio system which utilizes a TDMA structure and a CDMA code for each time slot (channel) so that multiple radios can communicate at the same time, refer to Figure 2 and column 5 lines 30 to 42. Santo discloses that multiple time slots (multiple channels) can be assigned to the same radio and each time slot can have a variable data rate, refer to Figure 2 and column 4 lines 44 to 67. Santo discloses that each time slot comprises a training sequence, refer to Figure 7 and column 9 lines 34 to 52.

Art Unit: 2662

2. Regarding claim 2 - Santo discloses that the training sequence can be same for all the data connections, refer to column 7 lines 43 to 50.
3. Regarding claim 3 and 4 - Santo discloses that data for multiple channels is superimposed into each slot with equal weighting, refer to Figure 4 and column 5 lines 49 to 67.
4. Regarding claim 6 - Santo discloses that the data rate is variable being more data symbols for a higher rate and less data symbols for lower data rate in a given slot. Therefore with a fixed number of training symbols the mean power per symbol between the training and data symbols will be variable, refer to Figure 2 and column 4 lines 24 to 67 and column 5 lines 1 to 22.
5. Regarding claims 12 and 13 - Santo discloses that the training sequence is a midamble, refer to Figure 7 and column 9 lines 34 to 54.
6. Regarding claims 14 and 15 - Santo discloses that the code is a direct sequence individual spreading code, refer to Figure 3 and column 5 lines 4 to 22.

Allowable Subject Matter

Art Unit: 2662

II. Claims 5, 7, 8, and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claims 1-15 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1. Baier et al. (US 5,970,060) discloses a method and system for radio transmission of digital signals.
